Lindt & Sprüngli supplier collaboration for Greenhouse Gas Emission Reductions under SBTi (Science Based Targets Initiative) Commitment Framework

Dear Lindt & Sprüngli Supplier,

As part of our commitment to sustainability, we are reaching out to bring you, our valued suppliers, on a journey of reducing greenhouse gas (GHG) emissions across our value chain.

In alignment with our dedication to environmental stewardship, Lindt & Sprüngli has approved near and long-term science-based emissions reduction targets with the Science Based Targets initiative (SBTi). The validated targets signify the Group's contribution towards achieving the objectives of the Paris Agreement, which aims to restrict the global temperature rise to 1.5°C above pre-industrial levels.

For further information please see Lindt & Sprüngli [Roadmap to net-zero](#).

Our commitment to sustainability extends beyond our own operations; it encompasses our entire value chain. We recognize the vital role suppliers play in achieving these targets, considering the close interconnection between our emissions and yours. 95% of the emissions in Lindt & Sprüngli carbon footprint come from Scope 3-related activities, meaning activities not under its direct operational control. The emissions from our suppliers' processes significantly contribute to the overall environmental impact of our products.

We therefore urge you to actively engage in reducing your GHG emissions footprint, aligning your targets with the [SBTi](#) framework.

It is only with the active involvement of our suppliers, that overcoming the challenge of achieving our ambitious emissions reduction targets becomes realistic. We strongly believe that your

commitment to sustainability is not only crucial for the environment and society but also for the long-term resilience and success of our businesses.

Your collaboration is not merely a corporate responsibility; it is an essential component of our shared commitment to a sustainable future. By working together, we can unlock innovative solutions and drive positive change across the entire value chain. This collaborative approach is pivotal to meeting and surpassing the expectations of our customers, stakeholders, and the wider community. We understand that adopting sustainability measures requires dedication and resources. To support your efforts, we are committed to helping, sharing best practices, and fostering an environment that encourages the implementation of climate-friendly initiatives.

Would you have any documents you deem appropriate to be shared with us to showcase your efforts in reducing your GHG emissions, please upload them in the document section of your Coupa Supplier page.

We look forward to your enthusiastic and active collaboration in achieving our shared sustainability goals.

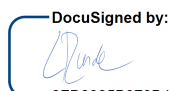

Together, we can make a significant impact on reducing GHG emissions and building a more sustainable and resilient future for generations to come.

Thank you for your attention to this crucial matter.

Best Regards
